

# Intel Environmental Health and Safety Policy

At Intel Corporation we are committed to caring for people and the planet from the development of our products, through our manufacturing and supply chain. We believe that our technology will play a key role in addressing the planet's sustainability challenges.

We are committed to these principles:

## **Regulatory compliance and beyond**

We comply with all applicable regulatory and Intel Environmental Health & Safety (EHS) requirements wherever we operate and also invest in voluntary initiatives to advance sustainable business practices. We engage with stakeholders to develop responsible laws, regulations and innovative programs that provide safeguards for the community, the workplace, and the environment, while allowing flexibility to advance our technologies. We recognize the importance of EHS to business success and we are committed to continually improving our EHS Management System, including standards, culture, performance, and injury reduction initiatives.

## **Safety and Health**

We provide a safe workplace for all our employees, contractors, customers, partners, and the public by integrating safety into our daily business and we encourage everyone to be responsible for both their safety and the safety of others to support an injury-free environment. We promote a healthy lifestyle and encourage employees to proactively manage their personal health.

## **Environmental Sustainability**

We identify principal environmental aspects of our operations, and mitigate impacts using "reduce, reuse, and recycle" principles. We are committed to environmental protection and strive to conserve natural resources through innovative processes and continuous improvement methodologies. We will continue to invest in energy conservation, work to reduce our environmental footprint, and adhere to our environmental policies (climate, water, and energy) and goals.

## **Public Information Transparency**

We are a responsible member of the communities in which we live and work. As we expand our knowledge and understanding of the impact of our operations and our products, we share this knowledge with the broader community to increase awareness of the importance of environmental issues. We transparently establish and regularly report on our EHS goals and metrics.

## **Supplier and Contractor Relationships**

We are committed to advancing accountability and improving EHS performance across our supply chain through proactive communication, assessments and audits, and capability-building programs. We encourage “green chemistry” principles, which require suppliers to identify safer material substitutes or alternatives where technologically feasible and minimize the use and creation of hazardous materials.

## **Emergency Preparedness**

We are prepared to respond to emergencies that could impact our operations, the environment, or the health and safety of employees and communities in which we operate.

Intel will provide the necessary resources and management oversight, and we will engage our employees to advance the principles and actions outlined in this policy and drive EHS excellence and continuous improvement throughout our global operations.
